3. Flow Chart of Troubleshooting

3-1. Baseband

3-1-1. Power ON

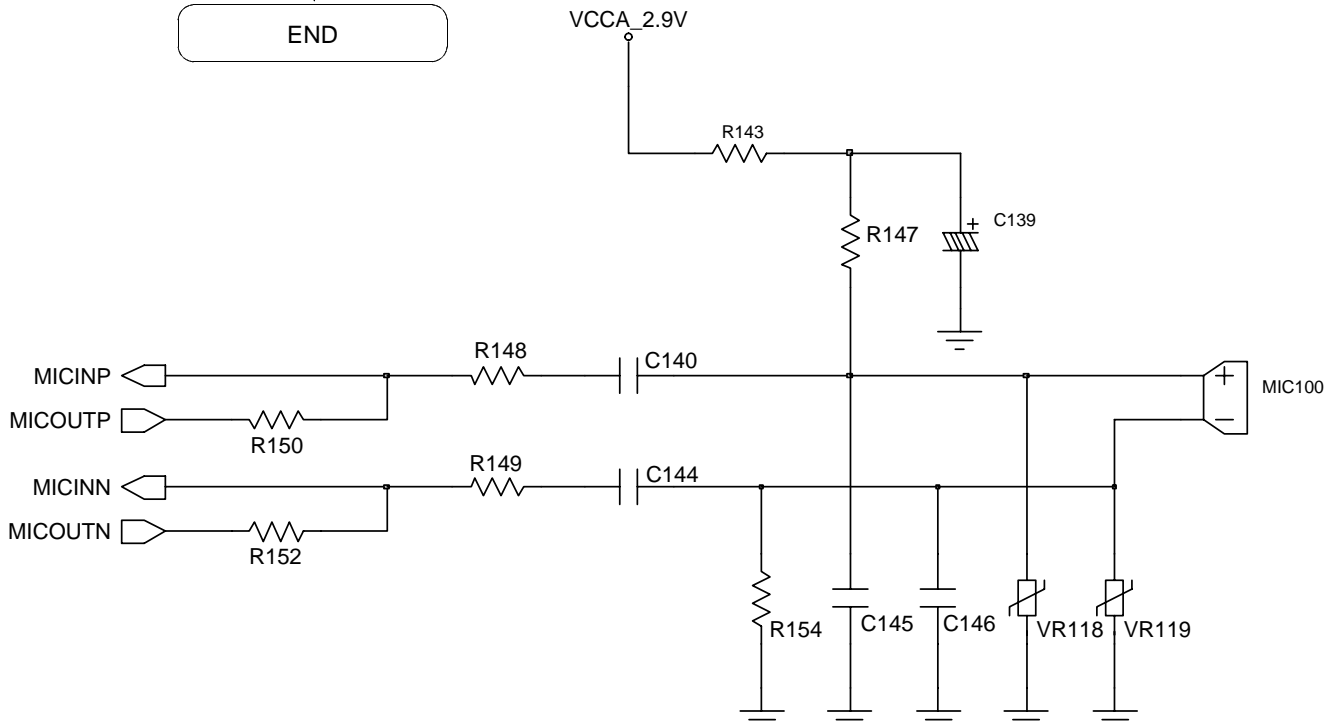

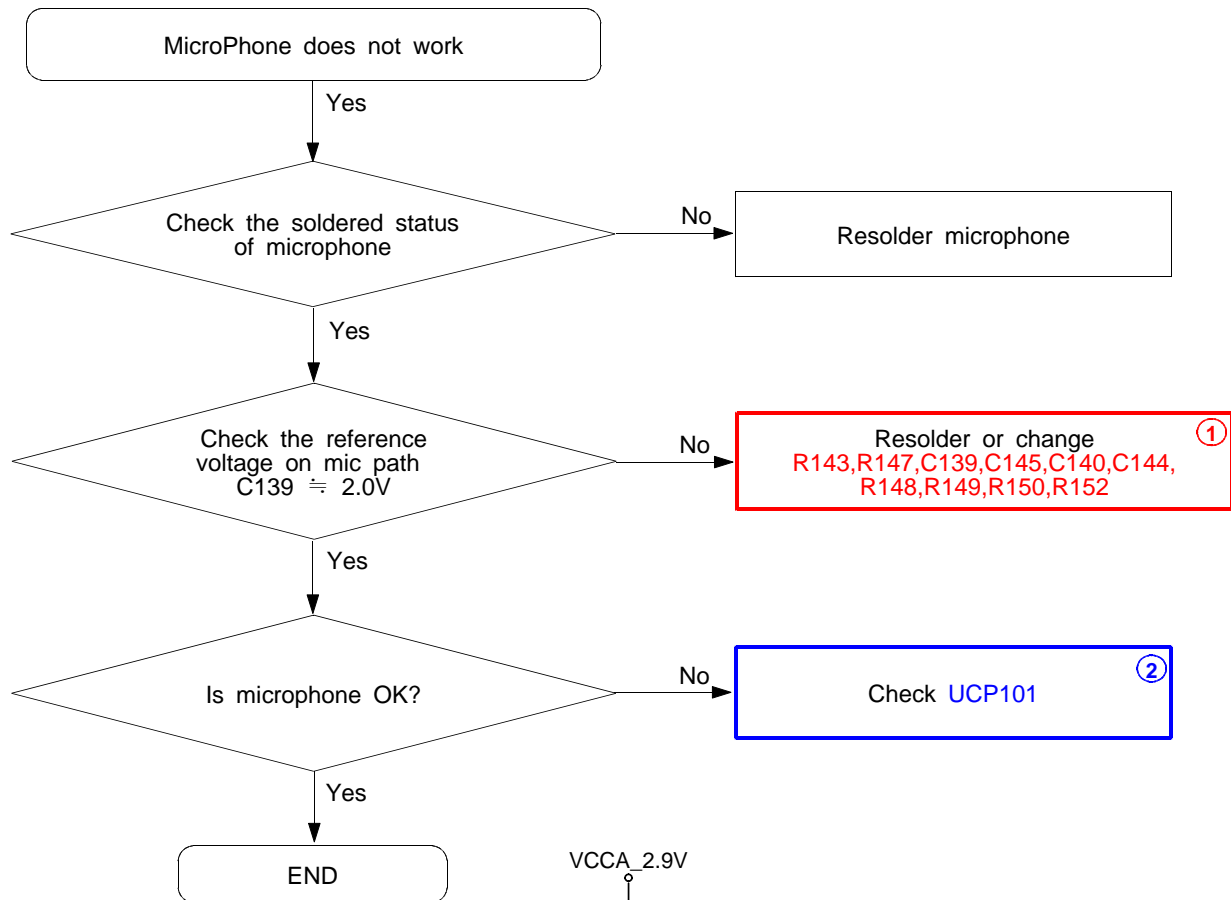

3-1-2. Initial

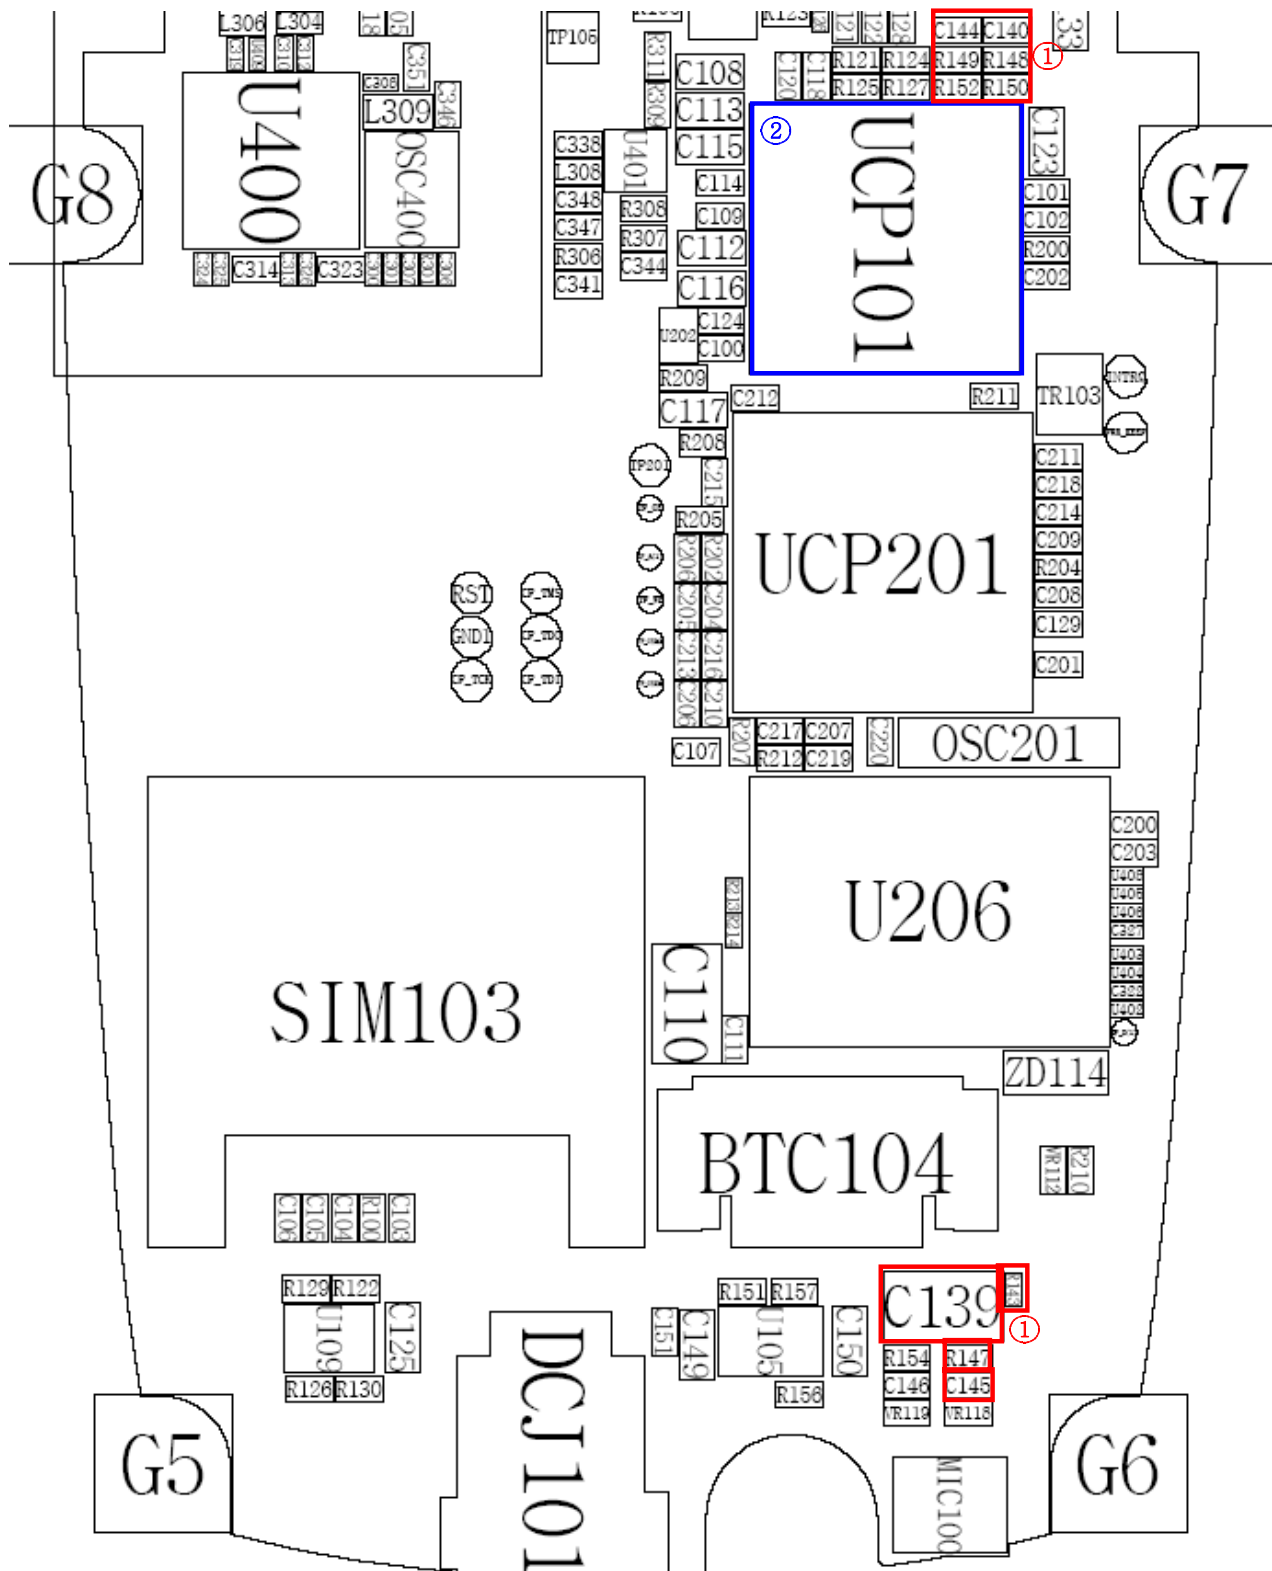

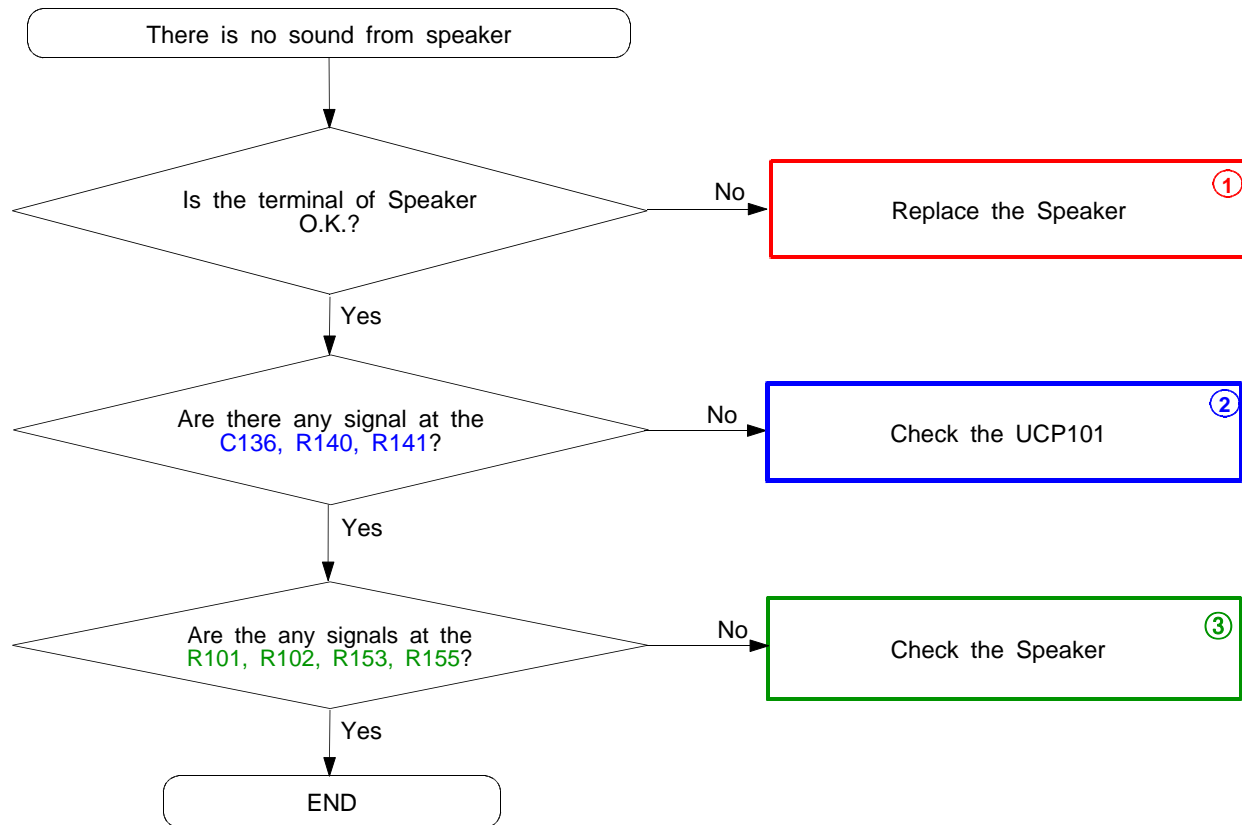

3-1-4. Microphone Part

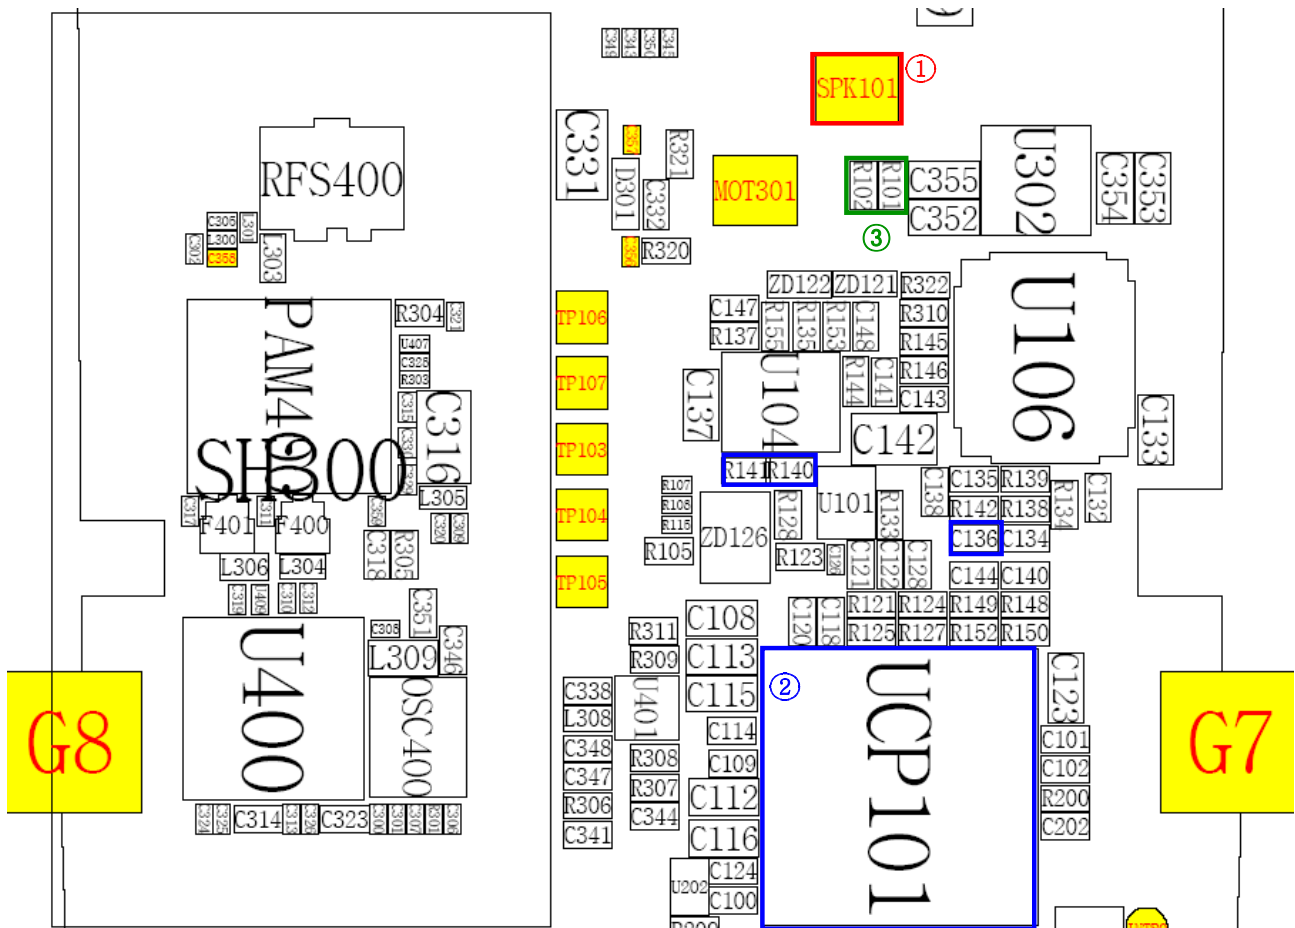

* Call with Sim before testing.

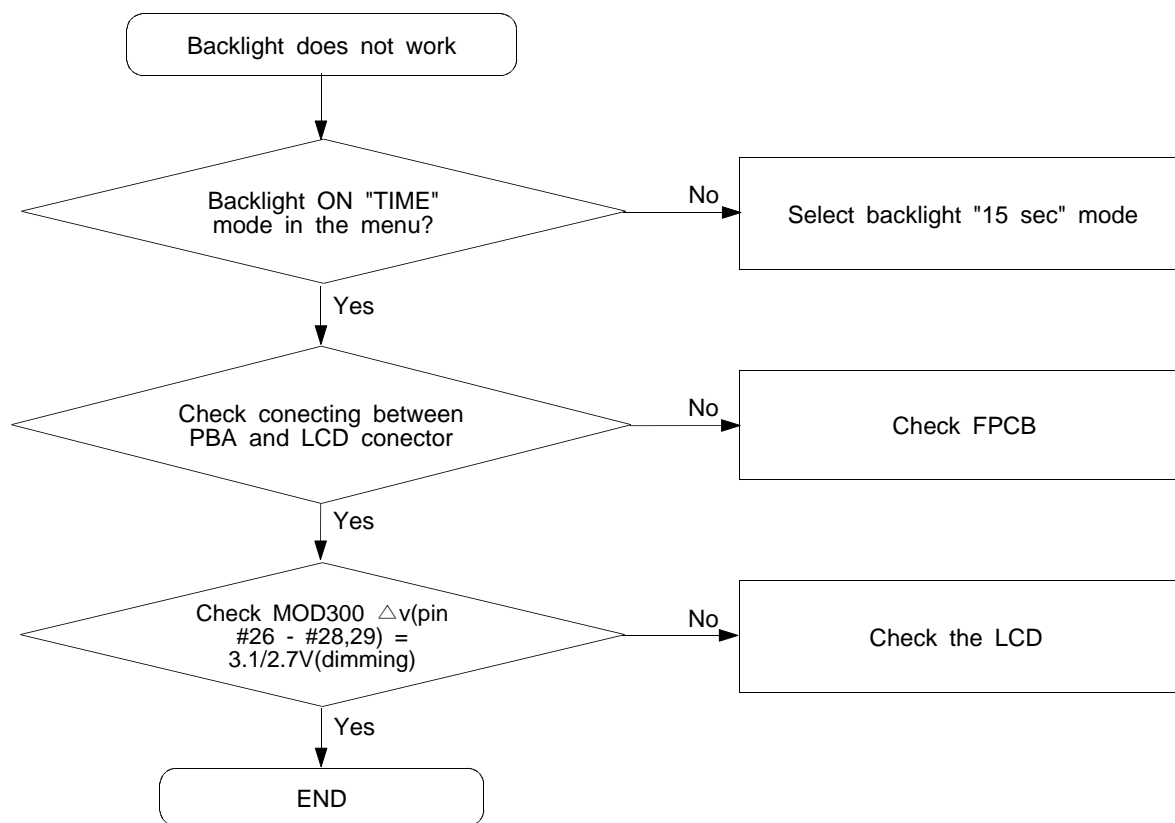

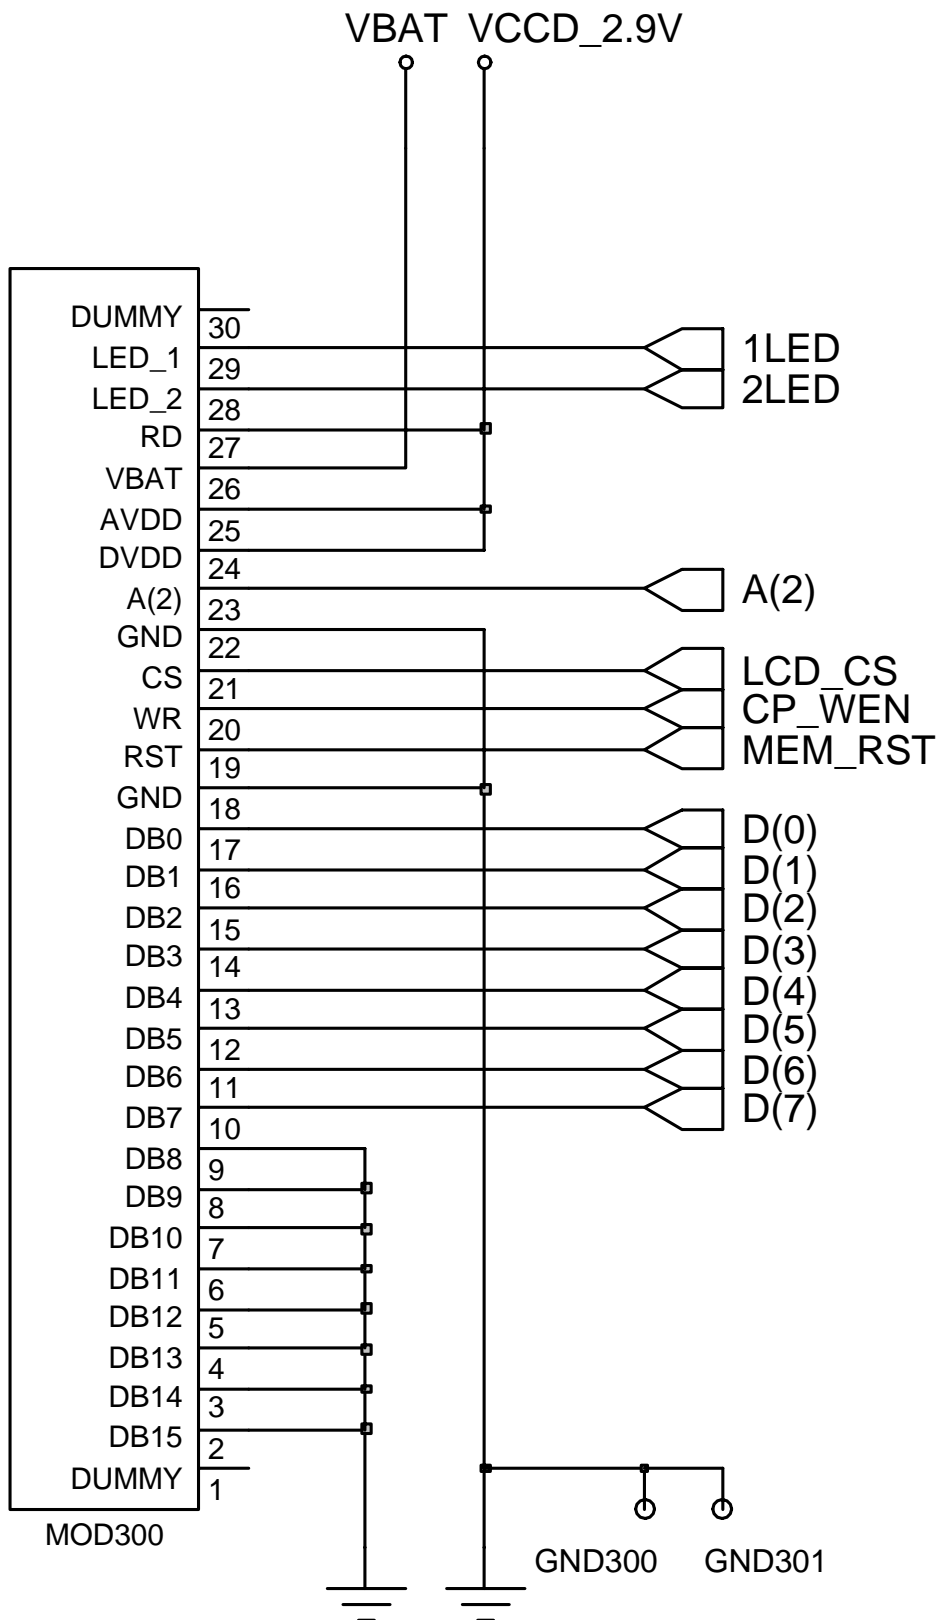

3-1-5. Speaker Part

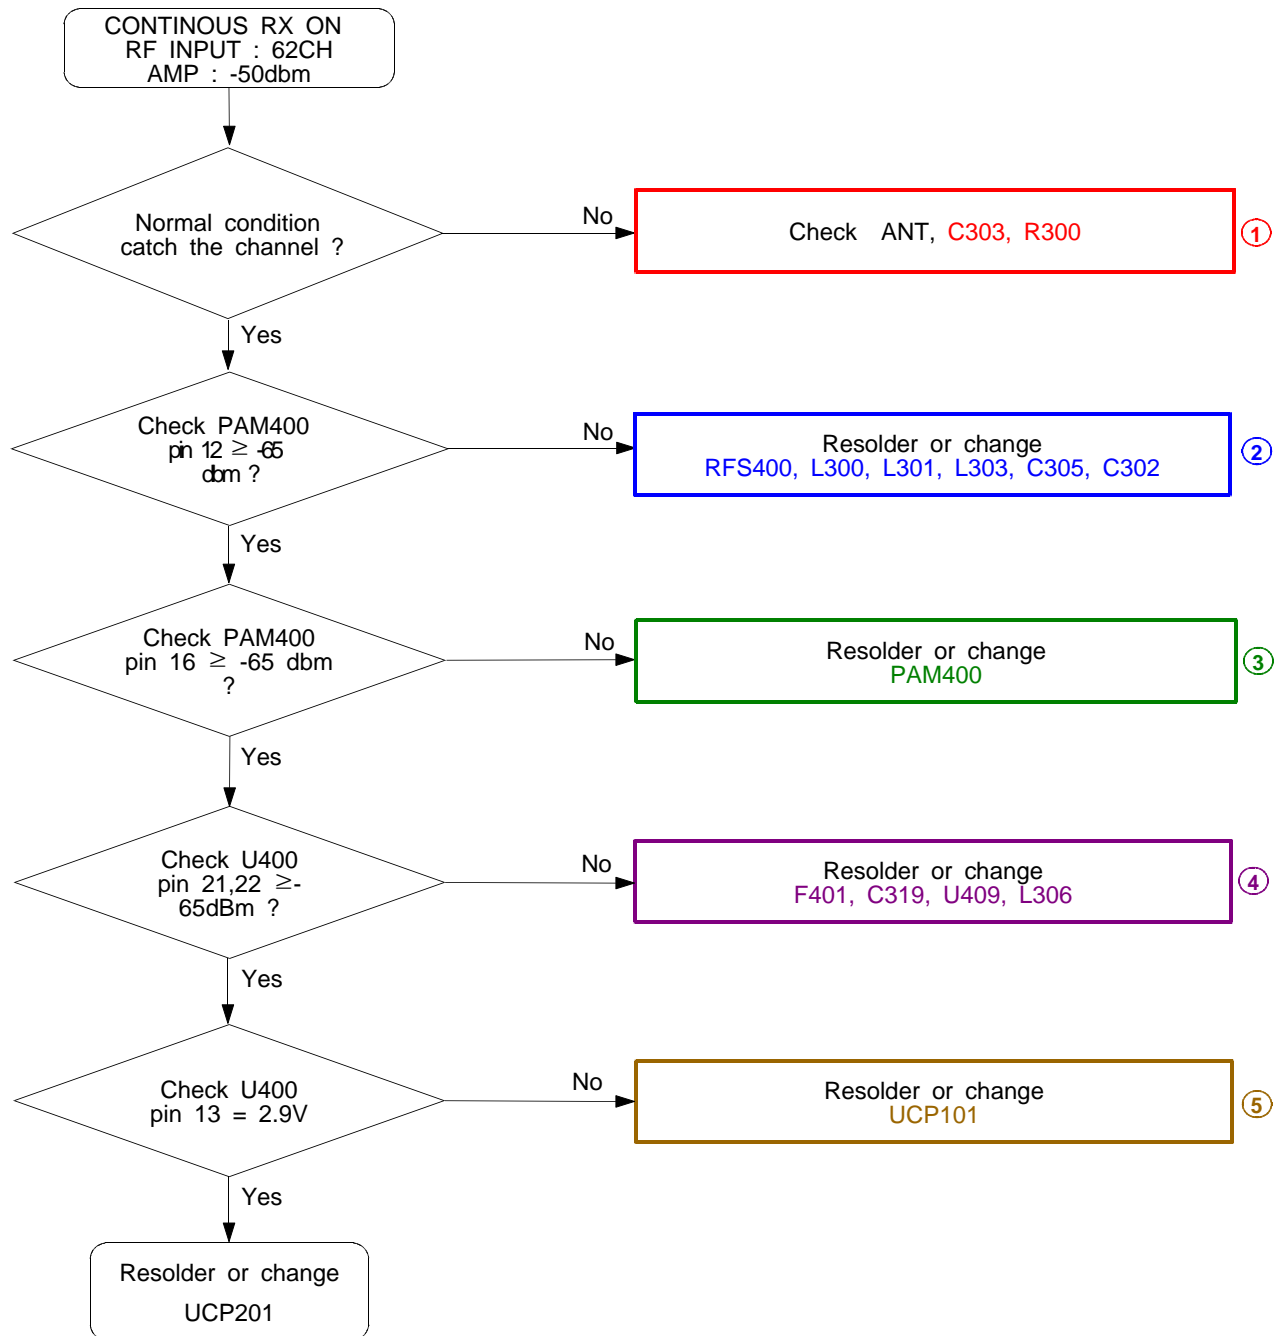

3-1-6. LCD backlight

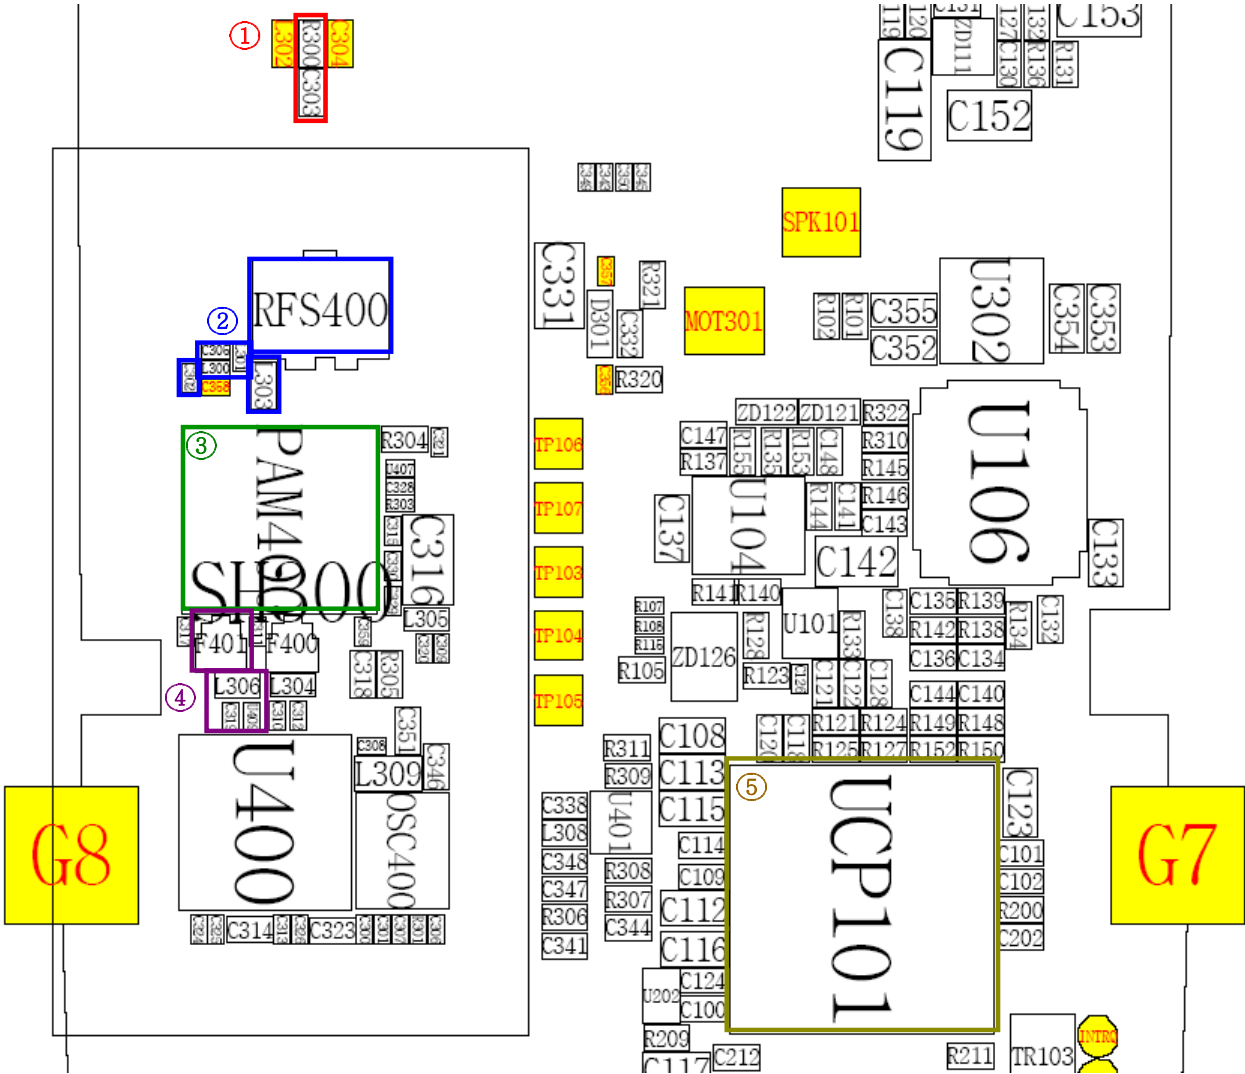

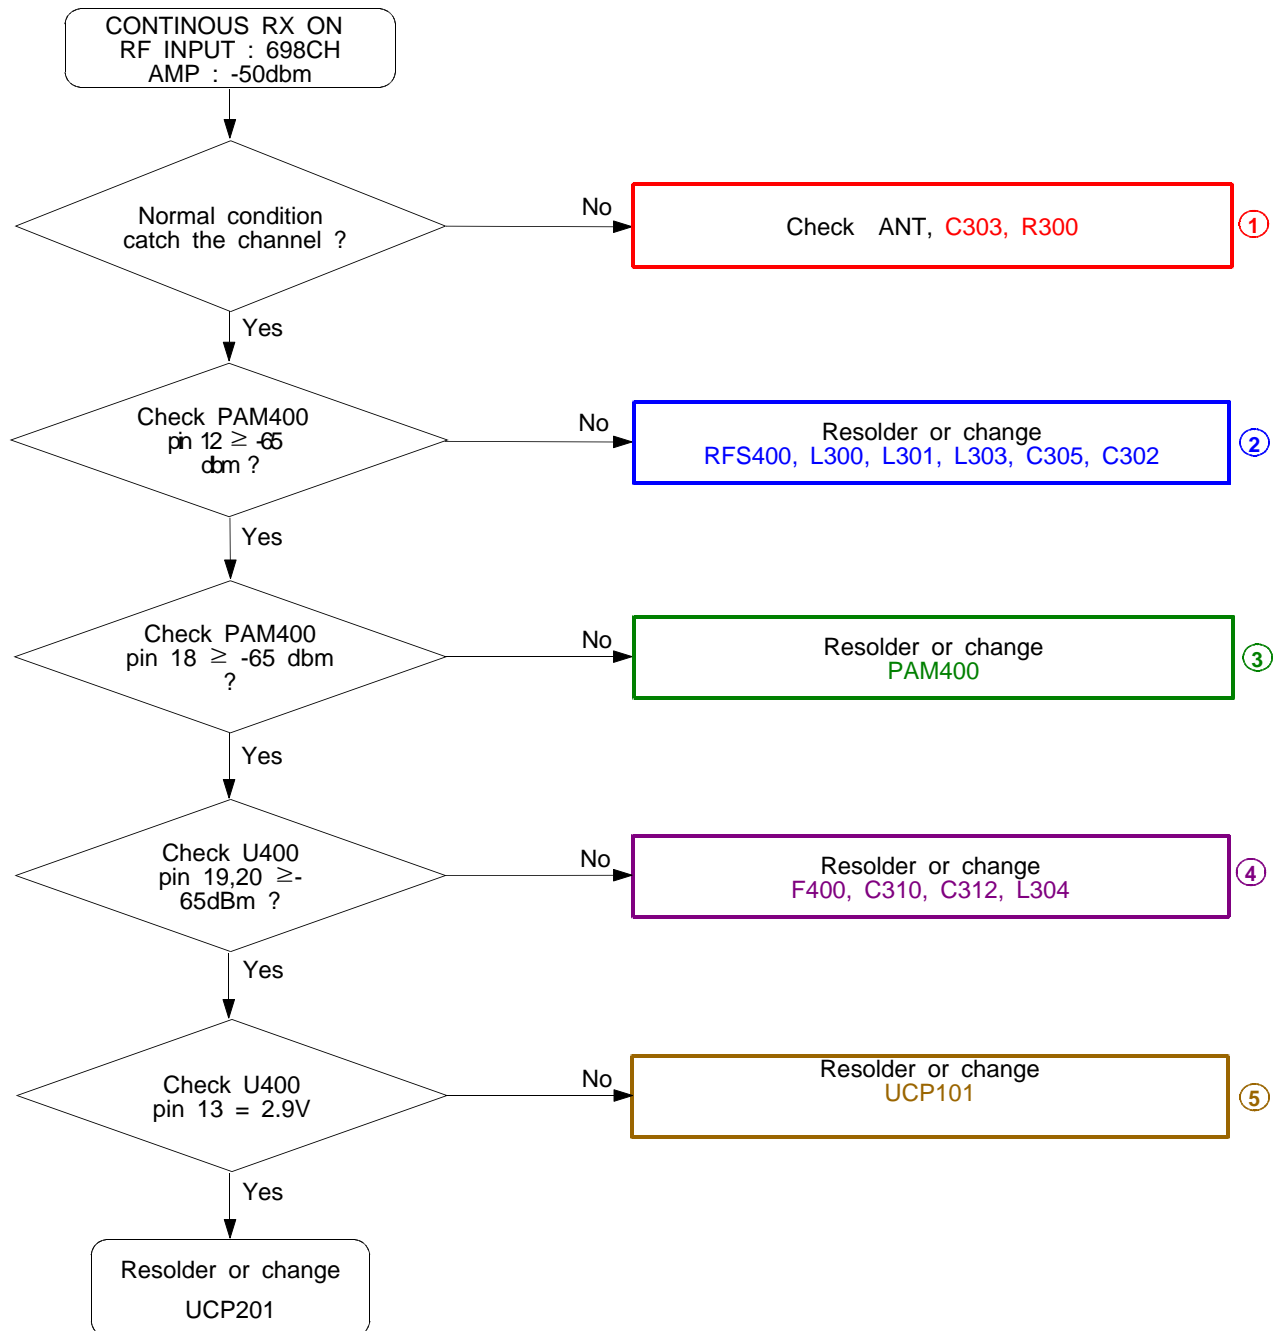

3-2. RF

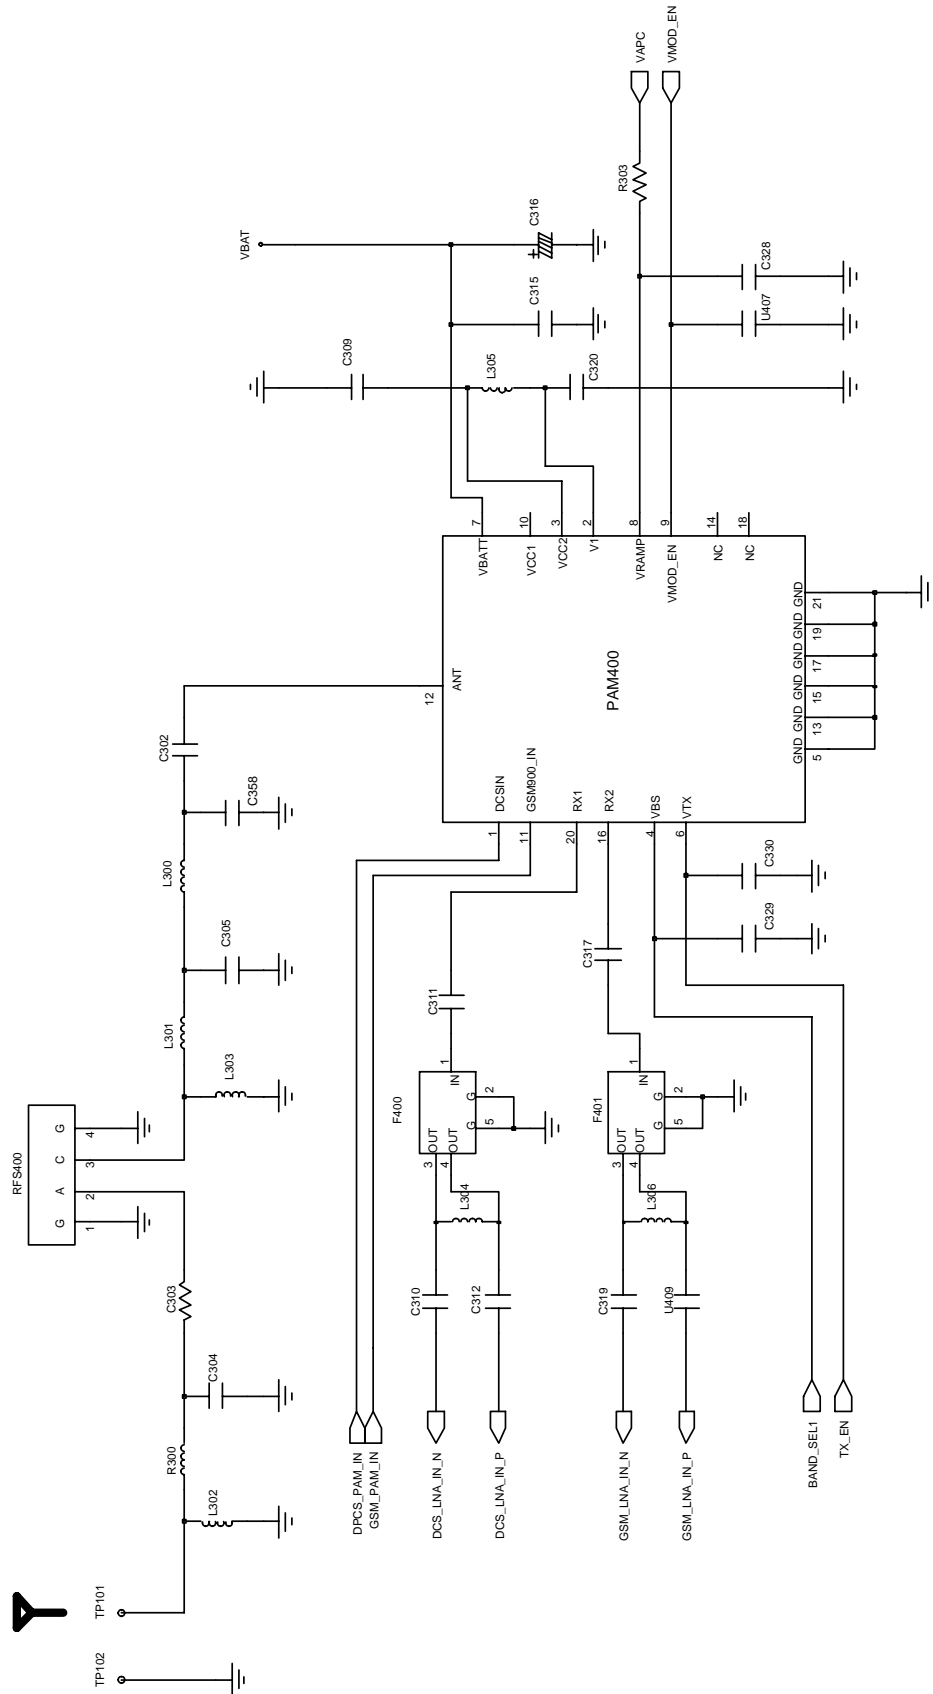

3-2-1. GSM Rx

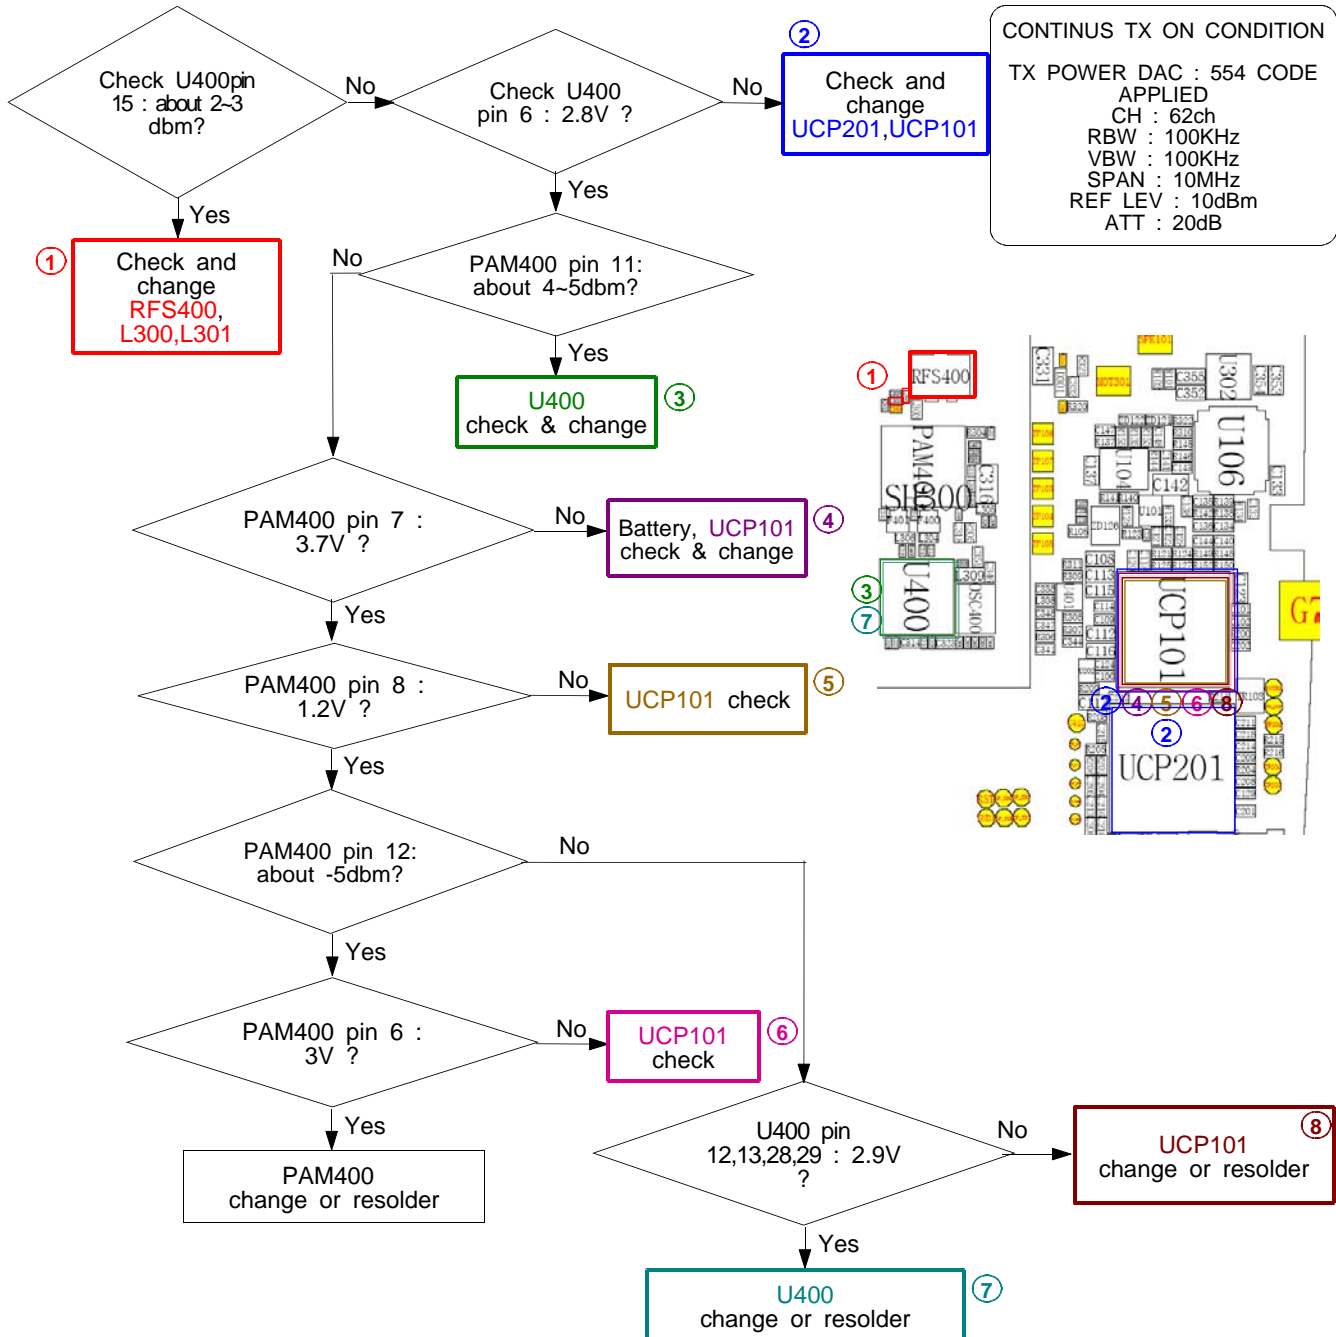

3-2-2. DCS Rx

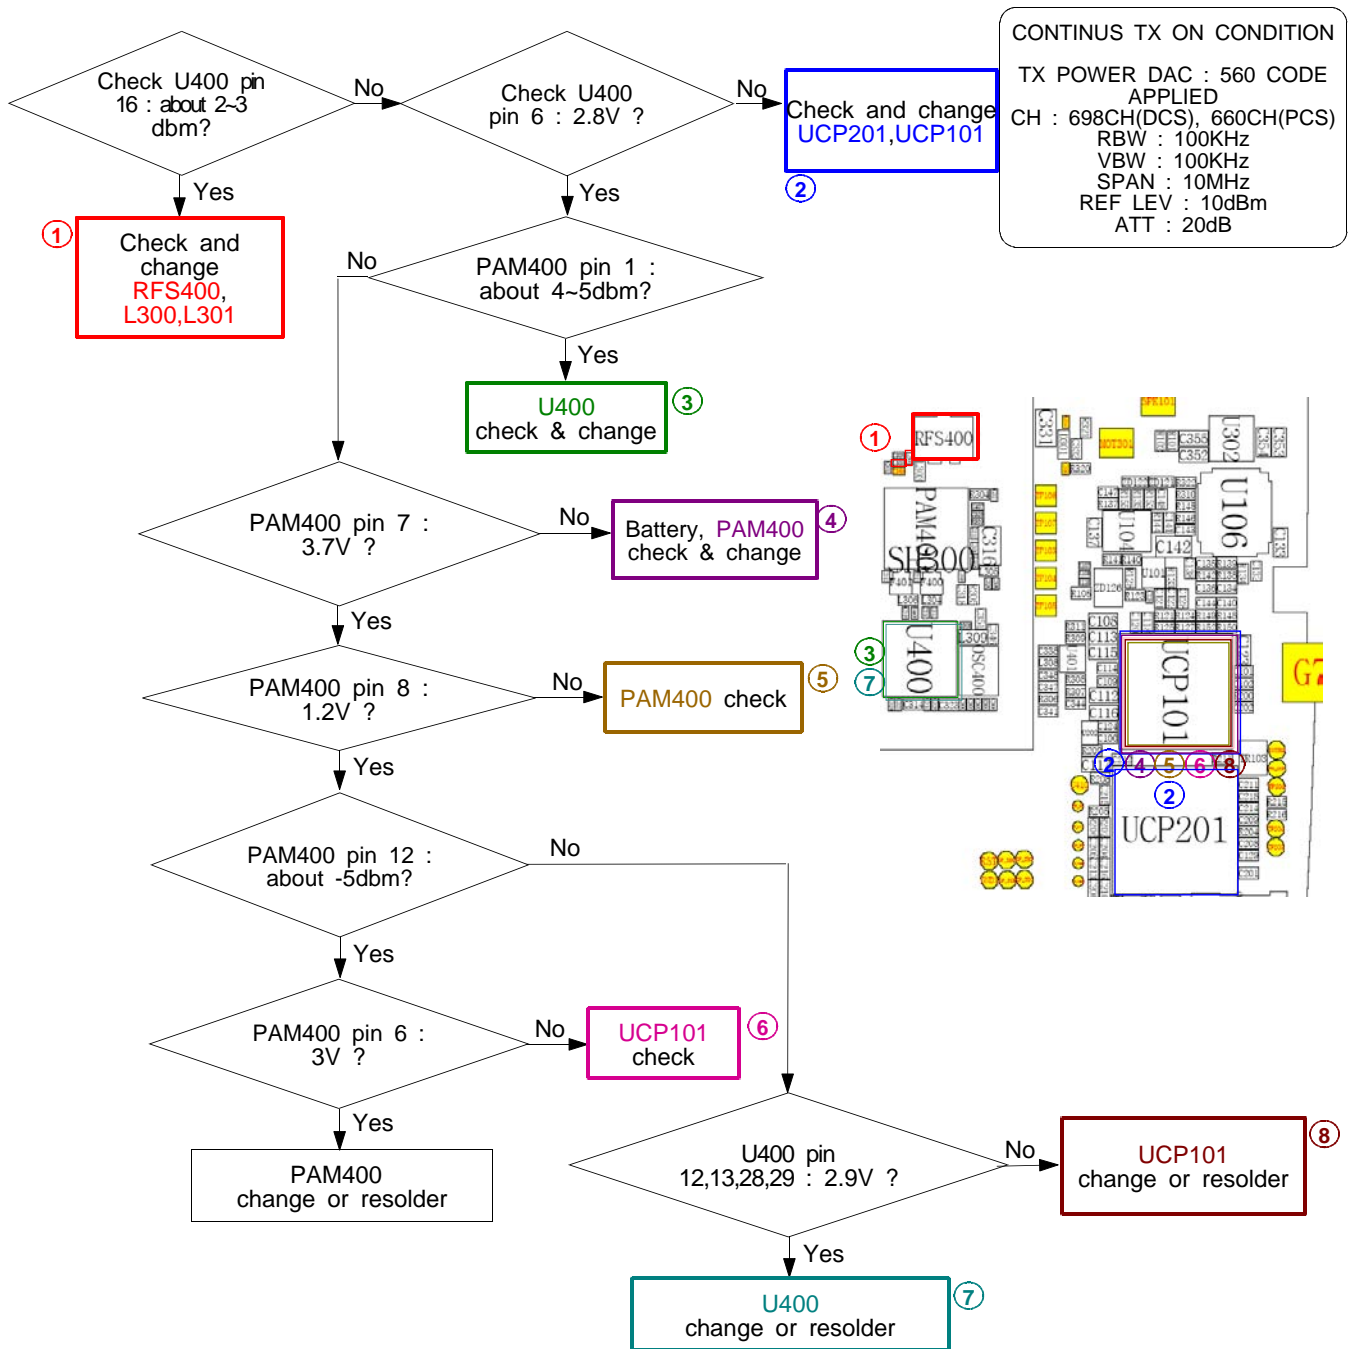

3-2-3. GSM Tx

3-2-4. DCS Tx

4. Array course control

Test Jig (GH80-00865A)

Test Cable (GH39-00743A)

RF Test Cable (GH39-00397A)

Software Downloadin

4-1. Downloading Binary Files

- Three binary files for downloading C140.
 - C140XXYY.s3 : Main source code binary.

4-2. Pre-requisite for Downloading

- Downloader Program([OptiFlash.exe](#))
- C140 Mobile Phone
- Data Cable
 - How to connect C140 data cable

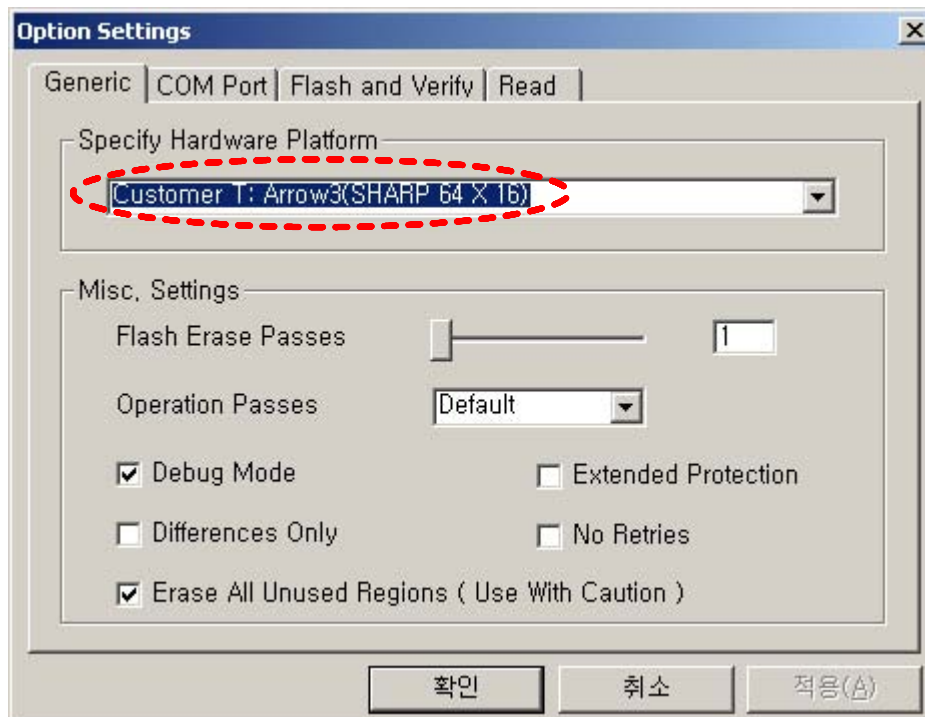

- Binary files

4-3. S/W Downloader Program

1. Load the binary download program by executing the “**OptiFlash.exe**”

2. Select the “**Options**” -> “**Settings**” -> “**Generic**” -> “**Specify hardware platform**”.
Choose hardware platform for the downloader file setting.
Set the everything else as the default values which are shown below

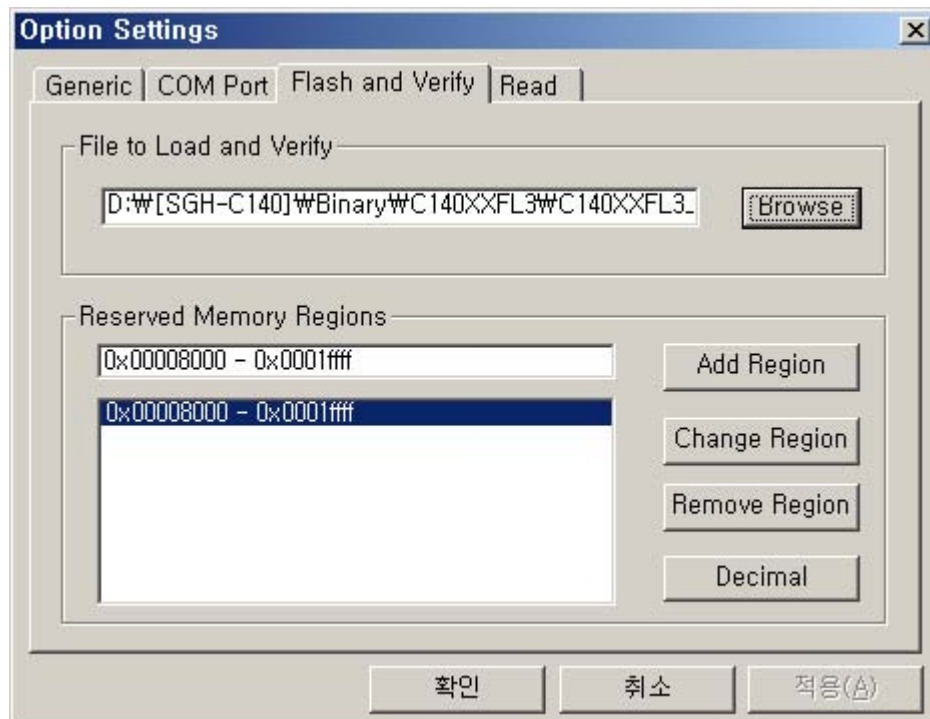

3. Select the **COM port** when the download cable is connected

Up to twelve ports are supported. Additionally you can select the maximum transfer speed OptiFlash will use to communicate with the phone. However, OptiFlash will use a slower speed if either the PC's or the phone's serial hardware is incapable of handling the selected speed

4. Select the “Flash&Verify” -> “Browse”

Set the directory path and choose the latest s/w binary, for example “C140XXYY.s3”, for the downloader binary setting.

Make sure that not to change the reserved memory regions.

In case of C140 the reserved memory regions are :

-0x00008000 – 0x0001ffff

5. Click “**OK**” button then press “**Flash**”.

(Before pressing ‘Flash’ button, push the button “*” and ‘END’ at the same time. Then press ‘Flash’.)

Downloader will upload the binary file as below for the downloading.

6. When downloading is finished successfully, there is a “All is well” message.

7. After finishing downloading, Certain memory resets should be done to guarantee the normal performance.

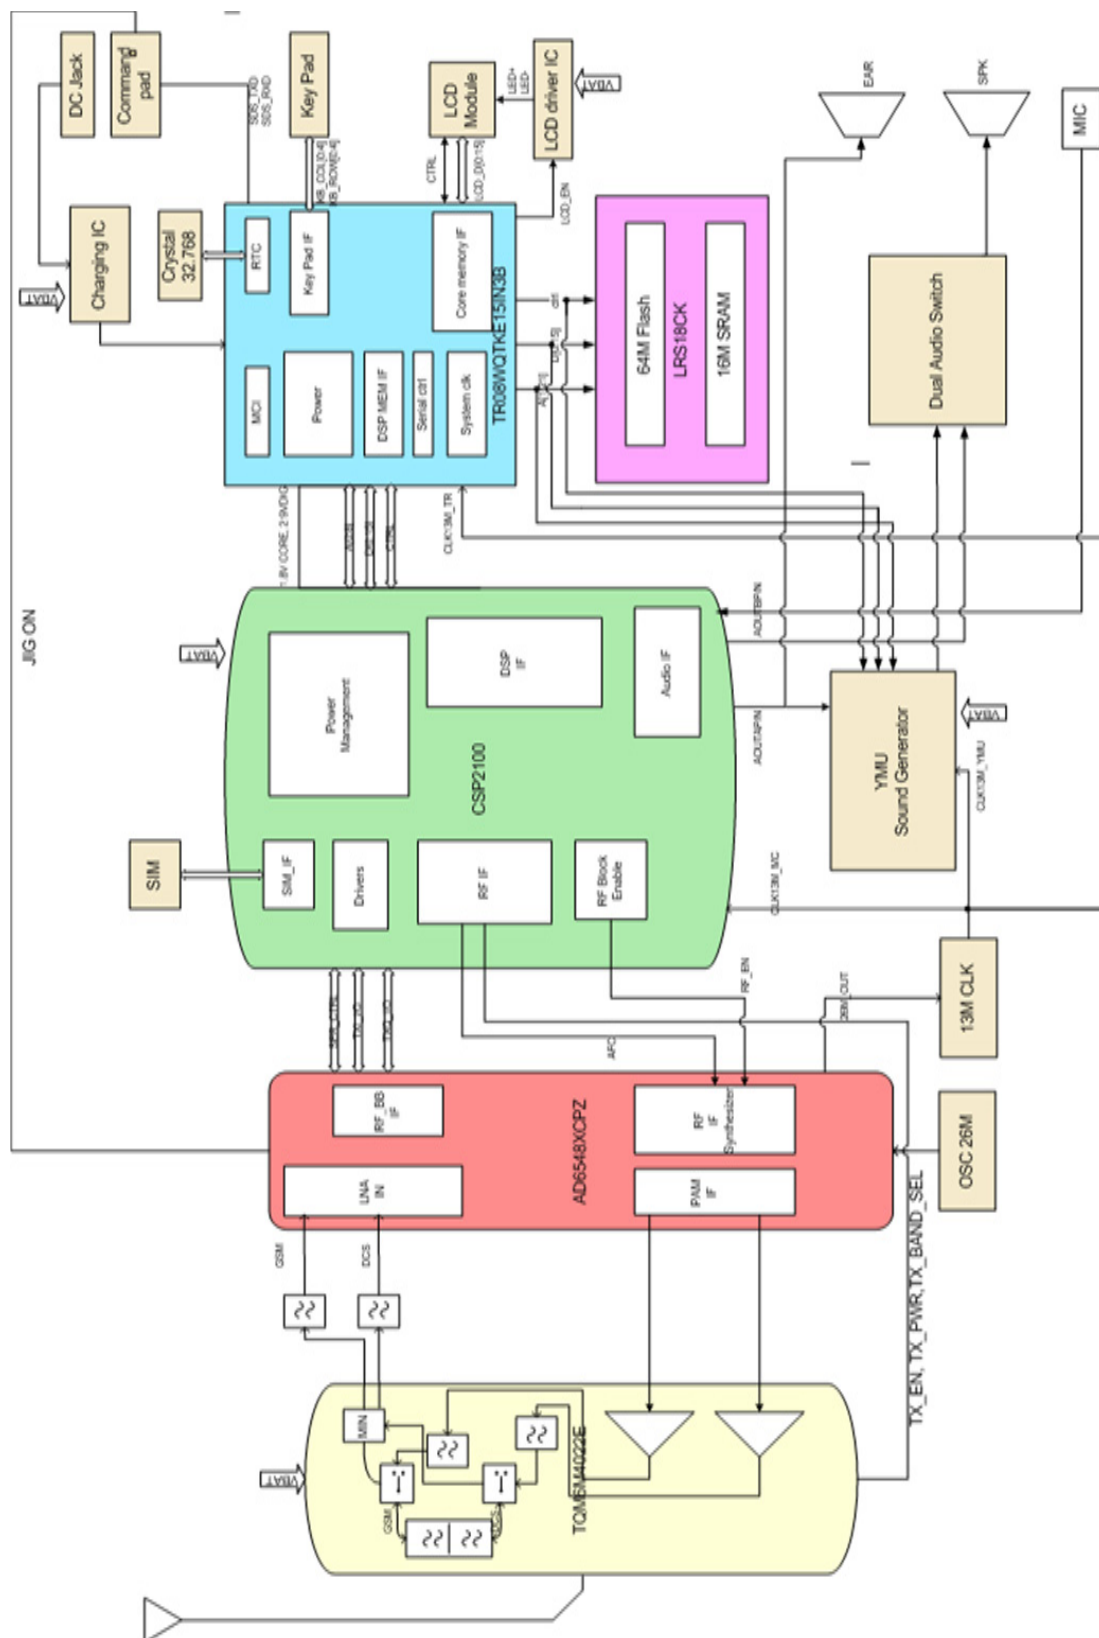

8. Confirm the downloaded version name and etc. :

***#1111#**

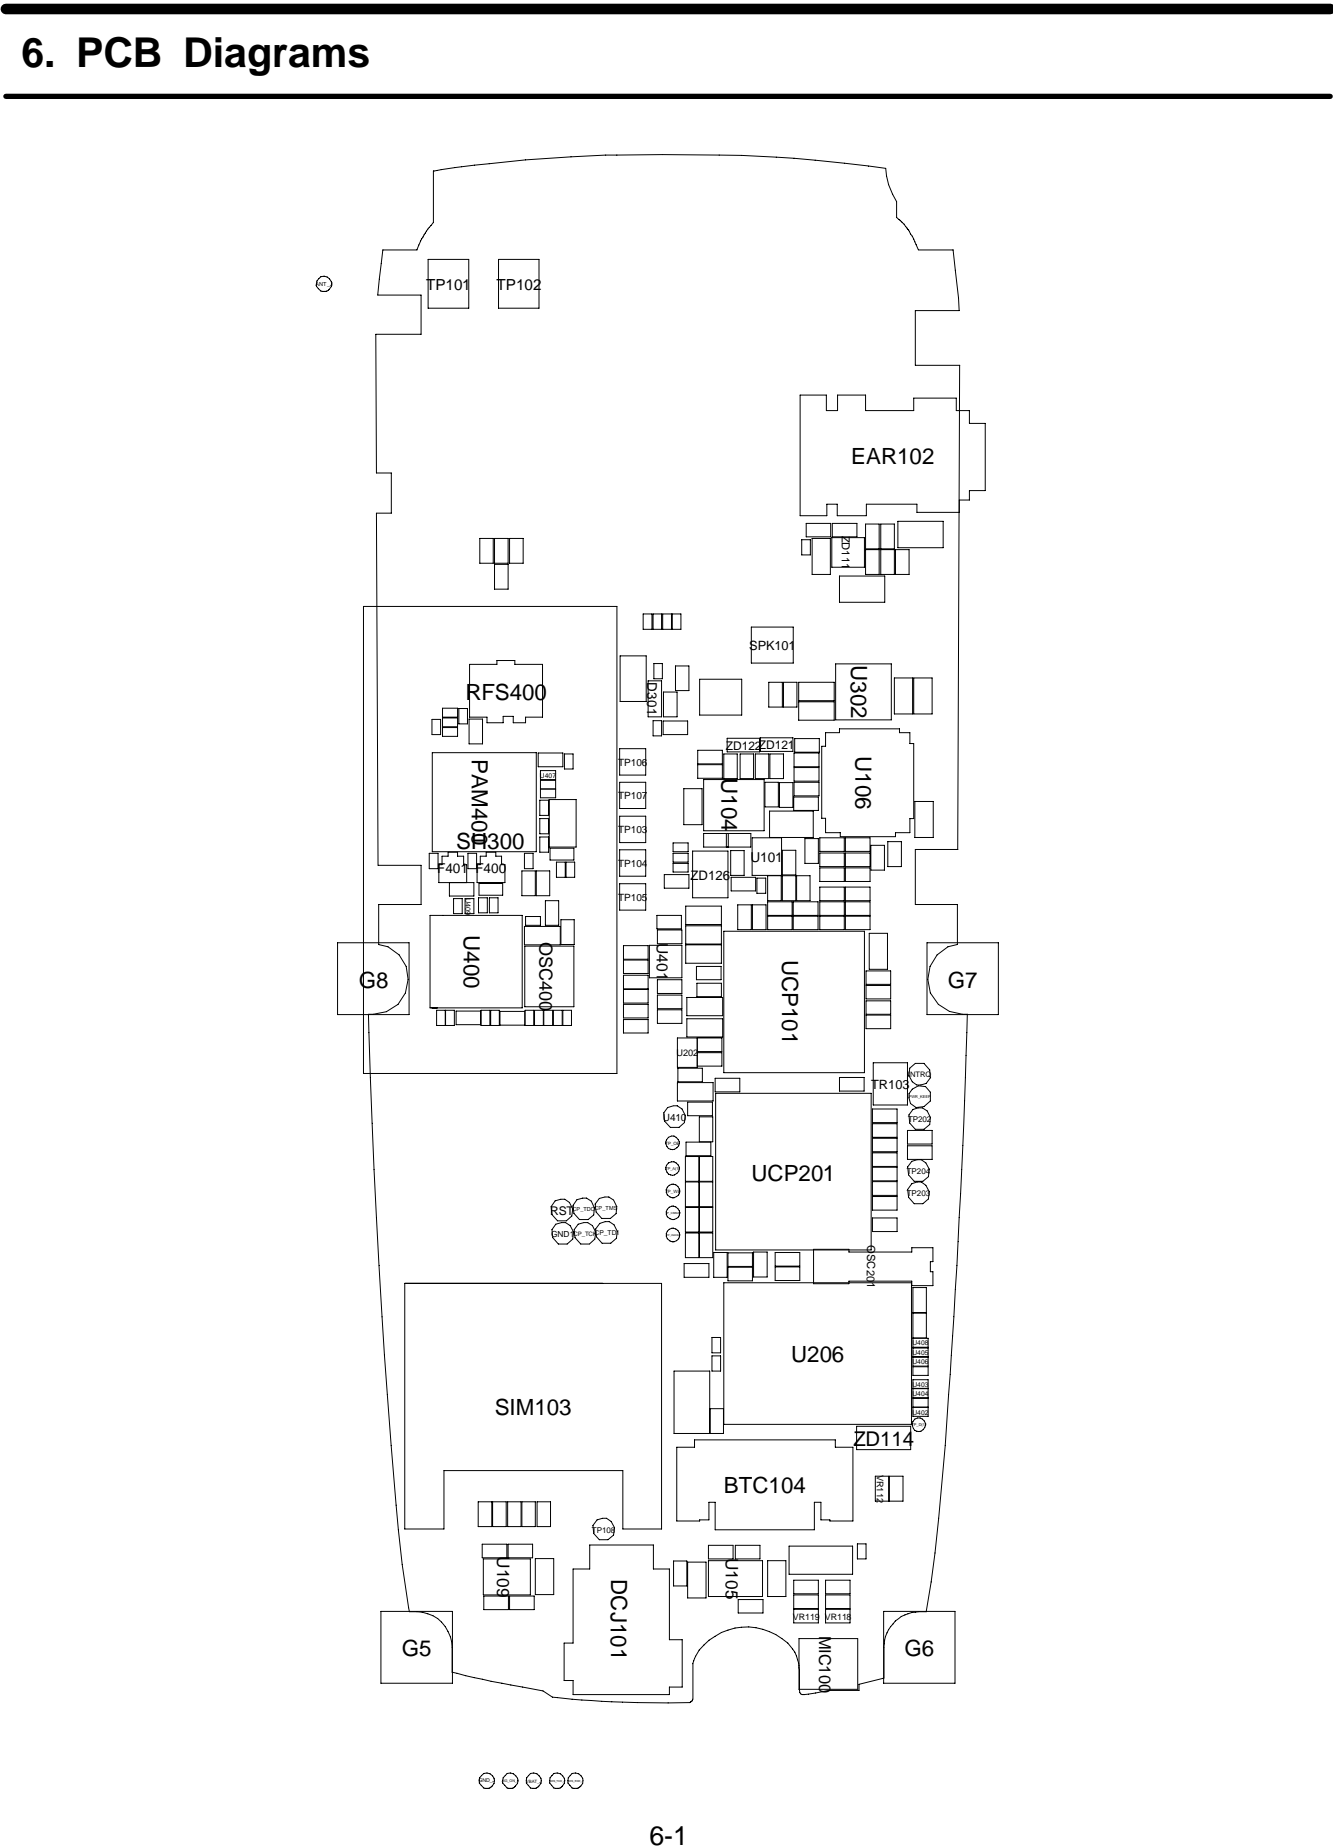

Full Reset :

***2767*3855#**

8. Reference data

8-1. Reference Abbreviate

AAC: Advanced Audio Coding.

AVC : Advanced Video Coding.

BER : Bit Error Rate

BPSK: Binary Phase Shift Keying

CA : Conditional Access

CDM : Code Division Multiplexing

C/I : Carrier to Interference

DMB : Digital Multimedia Broadcasting

EN : European Standard

ES : Elementary Stream

ETSI: European Telecommunications Standards Institute

MPEG: Moving Picture Experts Group

PN : Pseudo-random Noise

PS : Pilot Symbol

QPSK: Quadrature Phase Shift Keying

RS : Reed-Solomon

SI : Service Information

TDM : Time Division Multiplexing

TS : Transport Stream

9. Safety Precautions

9-1. Repair Precaution

- Repair in Shield Box, during detailed tuning.
Take specially care of tuning or test,
because specipcty of cellular phone is sensitive for surrounding interference(RF noise).
- Be careful to use a kind of magnetic object or tool,
because performance of parts is damaged by the influence of manetic force.
- Surely use a standard screwdriver when you disassemble this product,
otherwise screw will be worn away.
- Use a thicken twisted wire when you measure level.
A thicken twisted wire has low resistance, therefore error of measurement is few.
- Repair after separate Test Pack and Set because for short danger (for example an
overcurrent and furious flames of parts etc) when you repair board in condition of
connecting Test Pack and tuning on.
- Take specially care of soldering, because Land of PCB is small and weak in heat.
- Surely tune on/off while using AC power plug, because a repair of battery charger is
dangerous when tuning ON/OFF PBA and Connector after disassembling charger.
- Don't use as you pleases after change other material than replacement registered on SEC
System. Otherwise engineer in charge isn't charged with problem that you don't keep this
rules.

9-2. ESD(Electrostatically Sensitive Devices) Precaution

Several semiconductor may be damaged easily by static electricity. Such parts are called by ESD(Electrostatically Sensitive Devices), for example IC,BGA chip etc. Read Precaution below. You can prevent from ESD damage by static electricity.

- Remove static electricity remained your body before you touch semiconductor or parts with semiconductor. There are ways that you touch an earthed place or wear static electricity prevention string on wrist.
- Use earthed soldering steel when you connect or disconnect ESD.
- Use soldering removing tool to break static electricity. , otherwise ESD will be damaged by static electricity.
- Don't unpack until you set up ESD on product. Because most of ESD are packed by box and aluminum plate to have conductive power,they are prevented from static electricity.
- You must maintain electric contact between ESD and place due to be set up until ESD is connected completely to the proper place or a circuit board.

10. Product Function

Main Function

- Network services
- SMS & SOS message
- Voicemail
- Web browser
- Calendar, Calculator, Speed dial, etc...
- SDN(Service Dialling Numbers)
